

Water Weekly

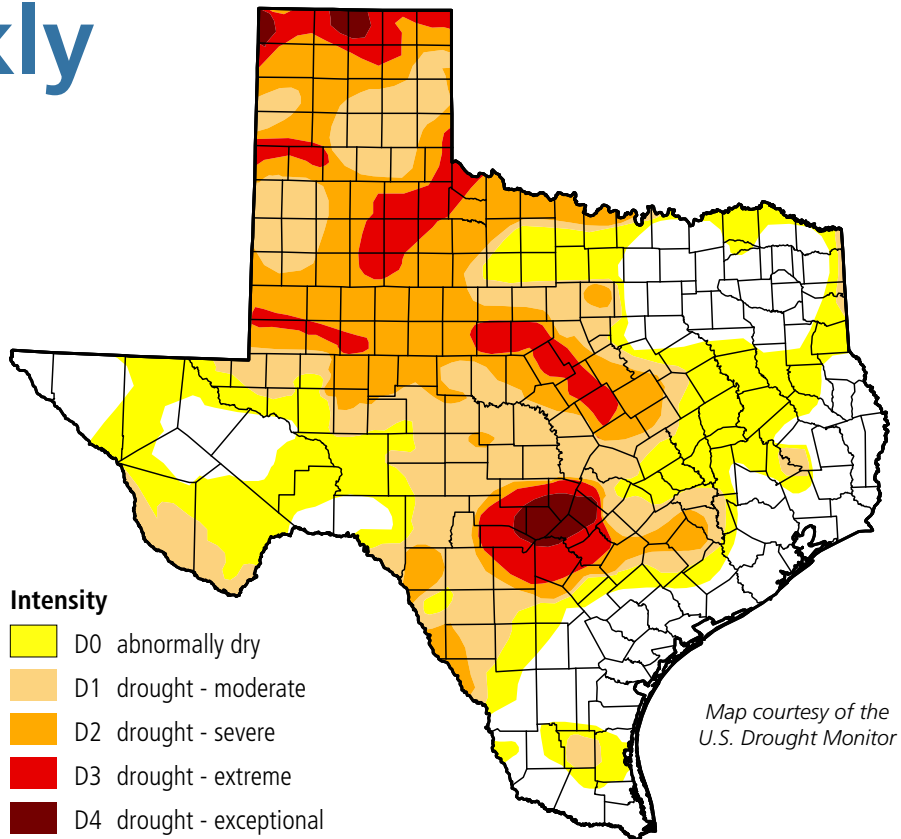

For the week of 12/05/22

Water conditions

The latest drought monitor map, for conditions as of November 29, shows a significant decrease in the area of the state impacted by drought. This is the fifth consecutive week that the total area of drought has decreased, now reaching its lowest value since mid-December 2021.

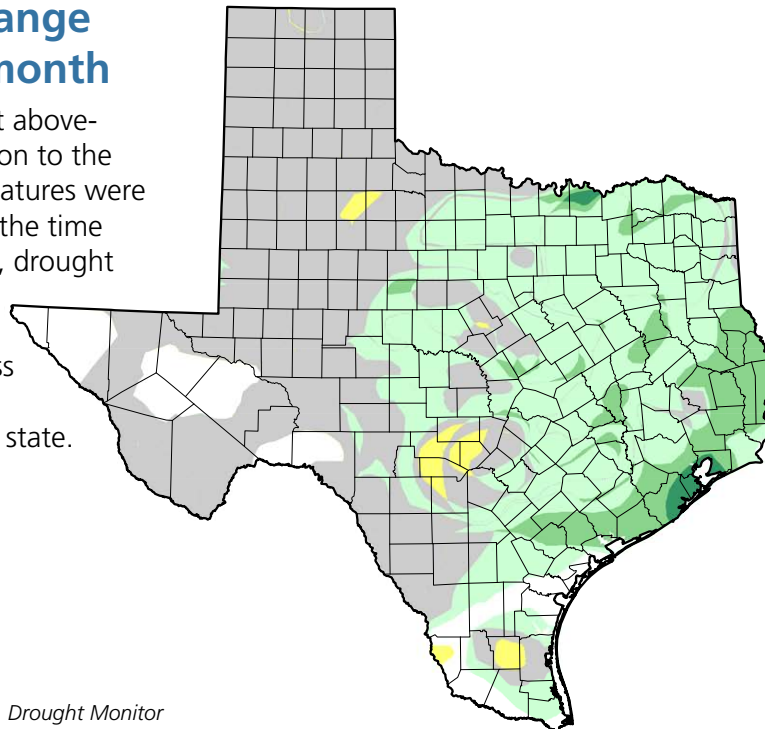

Drought conditions

- ◆ 52% now
- ◆ 63% a week ago
- ◆ 76% three months ago
- ◆ 49% a year ago

Drought change in the last month

November brought above-average precipitation to the state while temperatures were about average for the time of year. As a result, drought conditions improved at least one category across almost the entire eastern half of the state.
